

# Daily Status Report

Name : M. Eswari

Date : 15-12-2025

Today I worked on the healthcare medical page user interface by adding search and filter functionality in the hero section. I also connected it with the medicine listing, sorting, and cart features for a smooth user experience.

The screenshot shows a code editor with the following details:

- File Explorer:** Shows the project structure under "USERINTERFACE\_HEALTHCARE". The "src" folder contains components like "MedicalPage" and "Medicinejsx". "Medicinejsx" is expanded, showing files such as "AddCartModal.jsx", "Brands.jsx", "CartModal.jsx", "Conditions.jsx", "Deals50.jsx", "Hero.jsx", "MedicalPage.jsx", and "MedicineHero.jsx".
- Code Editor:** The "MedicineHero.jsx" file is open. It imports "MedicineHero.css" and defines a functional component "MedicineHero" that returns JSX for a hero section. The JSX includes a search bar with placeholder "Search medicines..." and an "onchange" event handler.
- Terminal:** At the bottom, the terminal shows the message "webpack compiled successfully".
- Status Bar:** Shows the current line (Ln 18, Col 17), spaces (Spaces: 2), encoding (UTF-8), and file type (JavaScript JSX).

This MedicineHero module displays the medicine page heading along with search and sort controls. It helps users quickly find medicines by name, price, or category.
