

# WORK UPDATE

Name : D Sri Ramya

Date : 18-3-2026

Today I worked on the Project Closure module UI, where I fixed alignment issues in the occupancy certificate section and ensured the YES/NO radio buttons are properly aligned in a single row. I also improved the file upload UI by adjusting the “Choose File” button positioning and overall layout for better clarity and consistency. Additionally, I verified form validations and ensured all mandatory document uploads are working correctly. Currently, the frontend part is completed and integrated with the API, and everything is functioning as expected.

## Project Closure Module – UI Development Documentation

### 1. Introduction

The Project Closure Module is designed to facilitate the submission of closure-related documents for a project in a structured and user-friendly manner. This module enables users to upload mandatory documents, verify project details, and submit closure requests efficiently.

The primary objective of this module is to ensure that all required documents are collected and validated before submission, providing a seamless user experience and maintaining data consistency.

### 2. Technologies Used

The module is developed using the following technologies:

- **Frontend:** React.js

# WORK UPDATE

- **Styling:** CSS (Custom styles with Flexbox and Grid)
- **Routing:** React Router
- **API Integration:** Fetch API
- **State Management:** React Hooks (useState, useEffect)

### Closure Details

Application No 100126524370

Project Name

Promoter Name vamsi

#### Supporting Documents

1. Do you have Occupancy Certificate: \* ☐ YES ☐ NO

2. All the Sale Deed Copies shall be uploaded \*  No file chosen

3. The Promoter has to form an Association of Allottee \*  No file chosen

4. The Common Areas/Amenities as completed and the same shall be handed over \*  No file chosen

5. An Affidavit regarding the Structural Liability Has to be submitted as per RERA format(F6) \*  No file chosen

6. An Affidavit regarding the structural liability has to be submitted as per RERA format(F7) \*  No file chosen

7. Consolidated Bank Statement of RERA designated bank account \*  No file chosen

## 3. UI Structure and Components

### 3.1 Page Layout

The page consists of the following sections:

1. Page Title (Closure Details)
2. Project Information Section
3. Supporting Documents Section
4. Form Inputs and File Upload Fields
5. Action Buttons (Reset & Submit)

The layout is designed using a card-based structure to enhance readability and maintain consistency.

### 3.2 Project Details Section

This section displays pre-filled project information:

- Application Number

## WORK UPDATE

- Project Name
- Promoter Name

These fields are read-only and are populated from either:

- Navigation state
  - Local storage
- 

### 3.3 Supporting Documents Section

This section contains all required document uploads and validations.

#### Occupancy Certificate

Users are required to answer whether they possess an Occupancy Certificate using radio buttons:

- YES
- NO

If the user selects YES, an additional file upload field is displayed dynamically.

---

### 3.4 File Upload Fields

The following documents are required:

1. Occupancy Certificate (Conditional)
2. Sale Deed Copies
3. Association of Allottees Proof
4. Common Areas Handover Proof
5. Structural Liability Affidavit (Form F6)
6. Unsold Units Affidavit (Form F7)
7. RERA Bank Statement
8. Project Photographs

Each file input supports specific formats such as PDF and images.

---

## 4. UI Enhancements and Styling Improvements

# WORK UPDATE

Several UI improvements were implemented to enhance usability and visual clarity:

## 4.1 Alignment Fixes

- Radio buttons (YES/NO) were aligned in a single row.
- Grid layout was used to align labels and inputs properly.
- File upload fields were aligned with corresponding labels.

## 4.2 Radio Button Optimization

- Default small-sized radio buttons were restored.
- Removed scaling issues caused by incorrect CSS.

## 4.3 File Input Styling

- Custom styling was applied to the file selector button.
- Alignment issues caused by negative margins were fixed.
- Button positioning was corrected for better visual balance.

## 4.4 Responsive Layout

- Flexbox and Grid were used to ensure proper spacing.
- Consistent gaps and alignment across all rows.

---

## 5. Form Handling and Submission

### 5.1 Form Data Handling

The form uses the FormData object to collect:

- File uploads
- Project details
- User inputs

### 5.2 API Integration

The data is sent to the backend using a POST request:

- Endpoint: `/api/project_closure/submit`
- Method: POST

### 5.3 Success Handling

## WORK UPDATE

- On successful submission, a success message is displayed.
  - The UI updates dynamically without page reload.
- 

### 6. Validation Logic

The following validations are implemented:

- Mandatory fields must be filled.
  - File uploads are required for all mandatory documents.
  - Conditional validation for Occupancy Certificate.
- 

### 7. Challenges and Solutions

#### Challenge 1: Radio Button Alignment

Solution: Switched from Flexbox to Grid for consistent alignment.

#### Challenge 2: File Input Misalignment

Solution: Removed negative margins and applied proper spacing.

#### Challenge 3: UI Inconsistency

Solution: Standardized layout using reusable CSS classes.

---

### 8. Conclusion

The Project Closure Module provides a clean, user-friendly interface for document submission. With proper validation, structured layout, and responsive design, the module ensures a smooth user experience.

The improvements made in alignment, styling, and functionality significantly enhance usability and maintain consistency across the application.

---

### 9. Future Enhancements

- Drag-and-drop file upload support
- File preview before submission
- Progress indicators for uploads

## WORK UPDATE

- Improved validation messages
