

WORK UPDATE

Name : D Sri Ramya

Date : 20-3-2026

Today I worked on enhancing the Project Closure module UI by fixing alignment issues in the occupancy certificate section and ensuring the YES/NO radio buttons are properly aligned with the form fields. I also improved the file upload UI by correcting the positioning of the “Choose File” button and making the layout more consistent across all rows. Additionally, I verified validations for all mandatory fields and ensured conditional rendering is working correctly. The UI is now clean, aligned, and functioning as expected, and the frontend integration is completed.

Project Closure Module – UI Enhancement & Validation Report

This document describes the UI enhancement, alignment corrections, and validation improvements implemented in the Project Closure module. The focus of the work was to improve usability, ensure consistent layout across form elements, and provide a clean and professional interface for document submission.

The module allows users to submit closure-related documents, verify pre-filled project details, and complete the process with proper validations.

The key objectives of the implementation were:

- Ensure all form elements are properly aligned
- Improve the visibility and usability of input fields
- Maintain consistency across all sections of the form

WORK UPDATE

- Implement conditional rendering for specific inputs
- Provide a smooth and error-free submission experience

3.1 Occupancy Certificate Section

- The “Do you have Occupancy Certificate” field was aligned in a single row.
- YES and NO radio buttons were resized to standard small circular inputs.
- Radio buttons were aligned exactly with other input fields using grid layout.
- Removed unnecessary spacing and right-side shifts.

3.2 Grid-Based Alignment

- Converted flex-based layouts into grid where required.
- Ensured labels and inputs follow a consistent two-column structure.
- Achieved uniform spacing across all rows.

3.3 File Upload UI Enhancements

- Fixed alignment issues of the “Choose File” button.
- Removed negative margins that caused vertical misalignment.
- Adjusted padding and positioning for a cleaner look.
- Ensured file inputs align perfectly with corresponding labels.

3.4 Button Styling Improvements

- Improved appearance of the file selector button.
- Maintained consistent color theme across UI elements.
- Enhanced hover effects for better user interaction.

WORK UPDATE

4. Form Structure

The form consists of the following sections:

- Application Number
- Project Name
- Promoter Name

These fields are read-only and populated dynamically.

The following documents are required:

1. Occupancy Certificate (Conditional)
2. Sale Deed Copies
3. Association of Allottees Proof
4. Common Areas Handover Proof
5. Structural Liability Affidavit (F6)
6. Unsold Units Affidavit (F7)
7. RERA Bank Statement
8. Project Photographs

WORK UPDATE

5. Conditional Rendering Logic

- When the user selects YES for occupancy certificate, an upload field is displayed.
 - When NO is selected, the upload field remains hidden.
 - This improves clarity and avoids unnecessary inputs.
-

6. Validation Mechanism

The following validations are implemented:

- All mandatory fields are marked with a red asterisk (*)
 - File uploads are required for all mandatory documents
 - File type restrictions are enforced (PDF, images)
 - Conditional validation based on user selection
-

7. API Integration

- Form data is collected using FormData.
- A POST request is sent to the backend API.
- Project details are appended along with uploaded files.

Workflow:

1. User fills the form
2. Uploads required documents
3. Clicks submit
4. Data is sent to backend
5. Success response is displayed
