

Daily Status Report

Name : M. Eswari

Date : 14-10-2025

The backend is developed using **Node.js** with **Express.js** to handle HTTP requests. It provides **RESTful APIs** to perform CRUD operations on doctor data, including retrieving, adding, updating, and deleting records. **Mongoose** is used to model the doctor schema and interact with MongoDB Atlas. CORS is enabled to allow requests from the frontend. The backend ensures proper error handling and sends responses for seamless frontend updates.

```
42 const express = require("express");
43 const mongoose = require("mongoose");
44 const cors = require("cors");
45
46 const app = express();
47 app.use(cors());
48 app.use(express.json()); // to parse JSON bodies
49
50 // -----
51 // MongoDB Atlas connection
52 // -----
53 const mongoURL = "mongodb+srv://eswarimadhavarapu912:healthcare234@cluster0.11c9dav.mongodb.net/?retryWrites=true&w=majority&appName=healthcare-system";
54
55 mongoose.connect(mongoURL)
56   .then(() => console.log("MongoDB Atlas connected"))
57   .catch(err => console.error("MongoDB connection error:", err));
58
59 // -----
60 // Doctor Schema
61 // -----
62 const doctorSchema = new mongoose.Schema({
63   name: { type: String, required: true },
64   specialization: { type: String, required: true },
65 });
```

PS C:\Users\USER\Documents\healthcare_system> cd healthcare-backend
PS C:\Users\USER\Documents\healthcare_system\healthcare-backend> node server.js
Server running on port 8080
MongoDB Atlas connected

The frontend is built using **React.js**, utilizing functional components and hooks for state management and lifecycle events. It displays a dynamic **Doctors List Table** that fetches data from the backend. Users can **view, edit, delete, or add doctors** through action buttons, with **FontAwesome icons** for a modern UI. Loading indicators and error messages enhance user experience. API calls are handled via **Axios** to communicate with the backend.
